
Lepton Optimizer - Taringa is a project made with the best intentions so that people realize they don't have to suffer from the particular computer problems anymore. It's not just another utility or software, but an online community where you will be able to share your experiences and knowledge about computing problems with others who are in the same situation as you and find new ways on how to fix them. What's even more important is that our aim is to help those people who care about their intellectual property and want to protect it from the threats of technology. Lepton Optimizer - Taringa was founded by two IT enthusiasts – Lukasz Oplewski and Dżigic Dżigic – who both have many years of experience in developing and diagnosing various problems and threats related to computer security. These threats are not only shown by malware or Trojans, but also by software which has been bought legally but is now trying to attack the system with its updates, as well as those applications which may be not malicious now, but could become such in the future. Lepton Optimizer - Taringa team does not have a permanent number of members, but it is being constantly expanded. Current members include: Lukasz Oplewski, Dżigic Dżigic, Fejo Šerbetli, Alex Mironov, Autospectr, Amivstrus. The project has been created out of a need for a non-profit organization that would deliver the greatest amount of useful information on the market to people who use their computers daily and want to protect them from malware and other similar dangers. It also aims to help those who care about their intellectual property and want to protect it from intruders. Currently Lepton Optimizer - Taringa is being developed at the same time when the team members are performing various actions to raise awareness in society about computer security problems. These activities include publishing articles in specialized publications, giving lectures in universities, organizing conferences and seminars, writing comments on software communities or forums - they are all designed to facilitate proper education of people who use IT on a daily basis for their work. Our main goal is to achieve better computer security standards. What's even more important for us is that all of our software projects are made with dedication and with the greatest availability of information about possible solutions.

Lepton Optimizer - Taringa is designed for all people who want to make use of the internet in the best way they can. It allows people to discover new methods on how to protect their systems from malwares or other computer threats.

The Lepton Optimizer - Taringa project also gives people the possibility to help others by sharing their knowledge about particular issues, including how they personally resolved them, and what were the results of their own research. Many users of Lepton Optimizer - Taringa offer each other invaluable advice that they find on specialized forums or blogs where they discuss IT issues.
